UX/UI & Product Designer with nearly 2 years of experience transforming complex SaaS requirements into intuitive, scalable digital products. I specialize in bridging the gap between psychology-driven research and high-fidelity execution. My approach is rooted in systems thinking—whether I'm building a dashboard or a design system, I focus on creating cohesive experiences that align user needs with business goals. I'm also a firm believer in the "AI-augmented designer," using prompt engineering to speed up the 'how' so I can spend more time focusing on the 'why.

EXPERIENCE

UX/UI And Product Designer   🏢 RCV Technolgies   📅 April.2024 – Present

At RCV Technologies, I've grown beyond just creating interfaces, I've learned how to think like a product designer who balances users, business, and scalability.

- I was involved in our in-house rebranding and brand creation, helping shape a clear and consistent visual identity across different products.
- I worked on designing a complete Restaurant Management System, including POS, staff management, kitchen display system, order-taking app, and vendor dashboard. My focus was on making daily operations smoother for both front-of-house and back-of-house teams.
- I also worked on different types of applications like a Football Tournament platform, Law Firm platform, Automobile aplatform, and a Modeling platform, adjusting my design approach based on the industry and user needs.
- Recently, I've been exploring AI tools to build rapid MVPs, Creating ideas faster and experiment more efficiently. I use AI to structure workflows, brainstorm concepts, define information architecture, create wireframes and UI designs, and even prototype interactions and animations with AI-assisted code.

I used reusable components and structured design patterns to keep the experience consistent and make development faster.

UX/UI Designer (Intern)   🏢 Flash cube IT   📅 Oct.2023– Mar. 2024

During my internship at my first company, I gained hands-on experience working on real design projects. It was my first step into practical product design, where I learned how ideas turn into real, usable solutions. I focused on improving layouts, usability, and basic design systems while collaborating closely with developers to understand how designs are implemented. I learned quickly, adapted fast, and even started using AI tools early to speed up my research and wireframing process.

- Supported web and mobile UI design for client projects, quickly adapting to real-world product workflows and delivery timelines.
- Contributed to usability improvements, layout refinements, and component library maintenance while rapidly learning design systems and implementation standards.
- Collaborated closely with developers to understand feasibility, handoff processes, and technical constraints early in my career.
- Even during my internship, I explored AI tools to speed up research, idea generation, and wireframing — helping me learn faster and deliver more efficiently.

TOOLS

Figma Design → Wireframes, high-fidelity UI, design systems, components, and Auto Layout. I also use it for case study presentations and storytelling.

Fig Jam → User flows, journey maps, and brainstorming ideas.

Figma make & sides → Creating UI designs faster with structured prompting.

Google AI Studio, Flow, Whisk & Antigravity → Building scroll animated, code-ready websites with micro-interactions and responsive layouts.

Adobe (Illustrator, Photoshop & Firefly) → Visual assets, UI graphics, and AI-generated visuals when needed.

Notion → Research documentation and project management.

EDUCATION

Master Course, Product Designing

📖 Google Professional Certificate   📅 Jun-Oct 2025

UX/UI Designing

📖 Ducat Accedemy   📅 Jan-Oct 2024

Bachelor of Arts, Psychology

📖 Delhi University   📅 2017-2020

SKILLS

Product designing

- Core UX & Product Design
- AI-Enhanced Design & Prompt Engineering
- Product & Leadership Skills

Languages

Hindi and English.

HOBBIS

Beyond Work

- I have a habit of reading books regularly, especially to explore new ideas and improve my thinking.
- I enjoy swimming, which helps me stay active and clear my mind.
- I love trekking in the mountains; it keeps me grounded, disciplined, and connected to nature.
